

Flexo

Design

Quality Assurance

Configuration

- > Provides a reliable, easy to install connection from the point machine to the disconnect box. The cornerstone of the design is a plug and socket arrangement on the point machine. Preterminated leads complete the system with a socket on one end and a moulded palm on the other. Possession times are dramatically reduced by using the Prysmian plug coupler system.
 - Specially designed for use with Alstom HW point machine
 - Nickel plated brass plug and socket arrangement will not deteriorate during service
 - Vulcanised neoprene, fully bonded to the cable sheath, provides a waterproof seal with excellent strain relief
 - Pre-terminated socket leads, available with moulded palm on the other end of the cable
 - Available in standard lengths: 5m, 10m, 15m and 20m. Any required length can be supplied in 5m increments
 - Designed for use with Prysmian Disconnect Boxes (please see separate datasheet)
 - Low smoke, zero halogen cable version is available
 - Quick, accurate connection at disconnect box
 - Satisfies the continuous drive within the rail industry for improvements to trackside electrical connections
- > A 100% testing regime is rigorously employed. Every lead is electrically tested at the factory for voltage withstand, insulation resistance and correct continuity. The plug & socket can only be coupled one way.
- > Tactile locator pips ensure that correct orientation can easily be achieved in the worst conditions. It is impossible to terminate incorrectly.
- > **Plug coupler:** For fitting to the point machine. Available in 4 Way & 10 Way configurations.
- > **Socket coupler with free cable end:** For connecting the point machine to a disconnect box, hard wired. Available in 4 Way & 10 Way configurations.
- > **Socket coupler with moulded termination on cable end:** For connecting the point machine to a disconnect box, quick assembly. This solution offers the speediest installation. Available in 4 Way & 10 Way configurations.
- > **Moulded termination and free end:** For connecting the disconnect box to the location cabinet. Available in 4 Way & 10 Way configurations.
- > The Prysmian Point Machine Coupler System holds Network Rail approval PAS05/297.
- > Cables: C2 and E2 cables comply with RT/E/PS/00005.
